

Gear pumps and motors

MAIN FEATURES:

- Body made of aluminium alloy and cast iron to withstand high pressure. Pipe connections, in line with the market standards
- Hardened gears made of special high-quality steel. Excellent surface finish
- Supports with self-lubricating PTFE-based bushings for high performance and long life
- Front flange in 6 different versions, in line with the market standards
- Newly designed gaskets to withstand high pressure and prevent leakage
- Oil seal with built-in support ring and dust guard lip to withstand both internal and external pressures
- Through-shaft for tandem connection (optional)
